## PRESS RELEASE

# Mach3 Super EcoFuel Saver-HD granted certification from SONCAP

Torrance, Ca USA

Ecomotive Products, Inc. announces the granting of product certification for Mach3 Super EcoFuel Saver-HD, fuel saving additive by the Standards Organization of Nigeria (SONCAP). This authorizes the import and distribution of Mach3 SEFS throughout the country of Nigeria.

Mach 3 SEFS-HD reformulates hydrocarbon fuel on a molecular level. It breaks down the clusters of long hydrocarbon chains present in all common fossil fuels into shorter, more easily burned components. Unlike many other products on the market, it does not rely on oxygenates as a combustion enhancer. Oxygenates can help to promote more thorough combustion, but they do so at the expense of increased exhaust gas temperatures, and reduced energy density. The increased exhaust gas temperatures can lead to long term engine problems as well as increased NOx emissions. The reduced energy density of oxygenated fuels means that more has to be burned to do the same amount of work.

Testing performed in accordance with the stringent US SAE J1321 Type Two test at an independent US EPA recognized lab showed a 13% increase in fuel economy in gasoline fueled vehicles and a 16% increase in fuel economy for diesel fueled vehicles.

Mach 3 SEF-HD reduces NOx emissions by an astounding 44%, CO emissions by 33% and HC emissions by 7%. It has also been proven to significantly reduce PM-10 and CO2 emissions. With tighter emissions regulations looming nationwide, SEFS-HD can help to bring fleets into compliance with a minimum of mechanical disturbance.

The introduction of Mach3 SEFS-HD into the Nigerian market will be a great benefit to both business and consumer by helping decreasing fuel cost and reducing dangerous exhaust emissions output.
